

Summary

- Engineering Manager with 14+ years of experience building high-performance backend systems and leading distributed engineering teams.
- Currently managing a team of 8 engineers at Progress (Chef), driving Platform 360 — a multi-tenant SaaS platform serving enterprise customers.
- AI-augmented engineering leader — Pioneered adoption of GitHub Copilot across the team, embedding custom instructions and prompt engineering into repositories.
- Deep expertise in Golang, AWS, PostgreSQL, and OpenSearch. Passionate about clean architecture, developer productivity, and reliable systems at scale.

Key skills

- Architecture: Microservices, RESTful APIs, gRPC, SaaS, Multi-tenant Systems
- Dev Tools: GitHub Copilot, Prompt Engineering, LLM-assisted Code Review, Git, CI/CD
- Management: Hiring, Roadmap Planning, Code Review, Mentorship

Programming

- **Golang**, C++, C, Core Java.
- **Scripting**: Shell Scripting, Python, JavaScript
- **Database**: PostgreSQL, OpenSearch, MySQL, Redis
- **Cloud**: AWS, Terraform, Chef

Education

- **M.Tech**: Software Engg MIT Manipal 2010-2012, **7.9 CGPA**
- **B.Tech**: Computer S LNCT Indore 2004-2008, **74.2 %**

Punit Mundra

Senior Engineering Manager

Experiences

Progress Software

Engineering Manager, Dec 2020 - Present

- Led the design and implementation of High Availability (HA) architecture for Chef Automate, enabling fault-tolerant, multi-node deployments and improving platform reliability and uptime.
- Owned and executed the migration from Elasticsearch to OpenSearch, re-architecting the search layer to remove licensing constraints and ensure open-source alignment, including zero-downtime migration.
- Designed and built the Automate Verify service, a pre-deployment validation framework to detect infrastructure misconfigurations and reduce deployment failures.
- Developed end-to-end CI/CD automation for HA deployments, enabling single-click provisioning of distributed clusters and reducing manual operational overhead.
- Led debugging and resolution of complex production issues across distributed systems including gRPC services, PostgreSQL, OpenSearch, and infrastructure layers, improving MTTR and customer experience.
- Collaborated across teams to drive architecture decisions, code reviews, and delivery alignment for platform-wide initiatives.

Finnovation Pvt Ltd

Team Lead, Aug 2019 - Nov 2020

- Led backend engineering for Video KYC (V-KYC) — a P2P video identity verification platform built as SaaS for enterprise banking customers. Deployed on AWS Lambda with WebRTC, Redis, and gRPC.

Exotel

Software Engineer-II, Nov 2018 - Jul 2019

- Built IP Calling SDK wrappers for enterprise customers. Implemented REST endpoints and FCM integration for mobile push notifications.

Mitel Networks

Senior M.Tech. Staff-I, May 2016 - Nov 2018

- Developed backend services for enterprise communication platforms. Contributed to scalable telephony infrastructure and performance optimisation for HA workloads.

Samsung R&D

Software Engineer-II, Jan 2014 - May 2016

- Worked on embedded and application-layer software for Samsung mobile and IoT products. Contributed to feature development, bug triage, and performance profiling.

Ixia Technologies

Software Engineer-I, Jul 2011 - Dec 2013

- Developed network testing tools and automation frameworks for protocol validation and QA.

Projects

Platform 360

Multi-tenant SaaS platform built on a microservices architecture supporting key Chef enterprise products. Delivers user & tenant management, authorization, and notification services at scale.

Technologies : Golang, PostgreSQL, OpenSearch, Replicated Engine, Docker, AWS

Roles : Design, Code Review, Collaboration with Product. Designed and implemented containerized services deployed via the Replicated engine, ensuring scalability, reliability, and operational consistency across customer environments.

Automate HA

High-availability architecture for Chef Automate — an enterprise platform providing centralized visibility into infrastructure, application, and security automation with full auditability. Designed HA-ready backend services supporting multi-node deployments in on-premises and air-gapped cloud environments. Developed CLI-driven workflows for pre-flight validation, firewall rule verification, and deployment consistency checks.

Technologies : Golang, PostgreSQL, OpenSearch, Terraform, Shell Scripting.

Roles : Hands-on troubleshooting of distributed systems through install, upgrade, and production recovery scenarios.
